

CareNest

*Bringing Families, Patients & Doctors
Closer — One Check-in at a Time*

A Product Thinking Case Study

Remote Personal Care · Elderly Health · India

104M+

Elderly in India

75%

Have Chronic Disease

₹889M

RPM Market 2024

22.5%

CAGR to 2033

THE PROBLEM

India's Elderly Are Falling Through the Gaps of Healthcare

104M+

Elderly Indians
(60+) in 2024

75%

Have 1+ chronic
diseases

20%

Urban elderly
live alone

1:811

Doctor-to-patient
ratio in India

Sources: UNFPA, NITI Aayog 2024, Union Health Ministry, NSO 2021

The Access Gap

74% of India's doctors serve urban populations, leaving rural communities underserved. Appointments are rushed, follow-ups missed.

The Digital Divide

Elderly patients struggle with app navigation, device setup & data entry. Without human support, technology reaches only the tech-savvy.

Who Are We Solving For?

Narrowing Down the Segment

All Patients in India

Starting point — entire patient universe

Elderly Patients (60+)

104M+ elderly in India by 2024

Elderly with Chronic Disease

75% of elderly have 1+ chronic conditions

Elderly — Living Alone / Limited Support

Our primary focus — highest unmet need

Why This Segment?

Highest Unmet Need

No continuous care between hospital visits

Largest Healthcare Burden

75% chronic disease, 8-9 medications daily

Fastest-Growing Segment

300M+ elderly Indians projected by 2050

Underserved by Digital Health

Low literacy means apps simply don't work

What Does the TRUE Problem Look Like?

Elderly patients in India are not receiving continuous, personalised care between hospital visits

WHY?

Because elderly patients cannot effectively monitor or manage their own health remotely — due to low digital literacy and physical limitations

WHY?

Because no single platform bridges the patient, their family, and their doctor with regular human contact — not just an app or a device

WHY?

Because healthcare in India has optimised for acute treatment, not continuous preventive relationship-based care for the elderly at home

Is This a Real Problem?

Research Data

75%

of elderly have 1+ chronic diseases
(NITI Aayog 2024)

65%

face high out-of-pocket health expenses
(UNFPA)

40%

of elderly have some form of disability
(NITI Aayog 2024)

57%

lonely elderly avoid health check-ups
(Gujarat study 2024)

22.5%

RPM market CAGR to 2033
(Grand View Research)

Key Takeaways

Elderly manage 8-9 medications daily with zero consistent oversight

No single platform bridges home care, family visibility & doctor access

Loneliness worsens health outcomes significantly among elderly

Unplanned admissions drop 57% with consistent remote monitoring (EPOCA 2024)

India's RPM market: \$889M in 2024 → \$5.4B by 2033

Why Solve It Now?

India RPM Market Size (USD Mn) · 22.5% CAGR

Rising Chronic Burden

60% of India's deaths caused by NCDs. Elderly fastest-growing care segment in the country.

Nuclear Family Shift

Urban migration leaving elderly without daily support — creating demand for professional care navigators.

Government Tailwind

Ayushman Bharat (2024) now covers 6 crore+ seniors aged 70+ — healthcare infra investment accelerating.

The window to build the right solution — human-first, accessible, relationship-rooted — is now.

Who Uses CareNest?

PRIMARY PERSONA

Ramesh, 72 · Retired Teacher

Pune, Maharashtra Lives alone — son in Bangalore

Pain Points

- Misses medications regularly
- No smartphone — can't use apps
- Doctor visits only once every 3 months
- No one to notice early warning signs

"I don't want to be a burden, but I worry about what happens if something goes wrong."

SECONDARY PERSONA

Priya, 42 · Product Manager

Bangalore Father lives alone 200km away in Pune

Pain Points

- Can't verify if he took his medication
- Guilt about not being physically present
- No visibility between doctor appointments
- Can't afford a full-time live-in nurse

"I call every day but I still don't really know if he's okay. I need professional eyes on him."

Ramesh's Journey — Before & After CareNest

✕ WITHOUT CareNest

Forgets medication — no reminder or follow-up

Feels chest pain — waits and hopes it passes

Daughter calls — he can't explain symptoms clearly

Emergency hospitalisation — entirely preventable

3-month gap before the next doctor visit

VS

✓ WITH CareNest

Navigator calls at 8AM — medication confirmed

Symptom flagged instantly → Navigator alerts doctor

Daughter sees real-time health update on dashboard

Issue resolved at home — hospitalisation avoided

Weekly home visit deepens trust and relationship

Introducing CareNest

A dedicated Care Navigator assigned to every elderly patient — the human bridge between patient, family & doctor

Weekly Home Visit

Navigator visits the patient every week — checking vitals, observing daily health, building trust

Daily Check-in Calls

WhatsApp-first calls — no app download needed. Works on any basic phone

Medication Reminders

Structured reminders + confirmation calls ensuring medication adherence every day

Family Dashboard

Real-time health updates for family — visibility without physical presence

Doctor Escalation

Navigator flags concerns directly to the assigned doctor — closing the loop instantly

Weekly Health Report

Structured report shared with family and doctor after every home visit

How Does CareNest Make Money?

Who Pays?

Adult children / family members — digitally literate, emotionally motivated, willing to pay for peace of mind

CareNest Basic

₹2,499/mo

- ✓ Daily check-in calls
- ✓ Medication reminders
- ✓ Weekly health report
- ✓ WhatsApp updates for family

CareNest Plus

₹4,999/mo

- ✓ Everything in Basic
- ✓ Weekly home visit
- ✓ Vitals tracking & logging
- ✓ Doctor escalation protocol

CareNest Premium

₹8,999/mo

- ✓ Everything in Plus
- ✓ Dedicated navigator
- ✓ Priority doctor access
- ✓ Full family dashboard

How is Competition Solving Elderly Care?

Player	Approach	Gap vs CareNest
Portea	Home nursing & healthcare visits	No ongoing navigator relationship or family bridge
Dozee	AI contactless vitals monitoring	No human connection — app-dependent
GoodFellows	Companionship for elderly	No clinical integration or doctor escalation
Anvayaa	Parent care platform for NRI families	Premium pricing; limited navigator model
KITES Senior	Clinical + compassionate care	Hospital-centric; not truly home-first
MediBuddy	Teleconsults & employer health	Episodic; not continuous relationship-based

CareNest's Edge: The only solution combining weekly home visits + daily calls + WhatsApp-first + family dashboard + doctor escalation

How Will We Measure Success?

★ **North Star: Patient Health Compliance Rate** — are patients actually following their care plan?

L1 METRIC

Navigator Check-in Completion Rate

Is the human layer delivering consistently every day?

L2 METRIC

Doctor Escalation Response Time

Is the clinical bridge working when it matters?

ADOPTION

% Patients Active After 90 Days

Are families retaining and finding value?

ENGAGEMENT

Family Dashboard Weekly Active Users

Are families informed and engaged?

GUARDRAIL

Emergency Hospitalisation Rate

If this rises, the navigator model is failing

SYSTEM

Navigator-to-Patient Response Time

Navigators must respond within SLA when called

What Could Go Wrong?

Navigator quality is inconsistent

✓ Structured training + monthly performance ratings by families + quality audit visits

Elderly patients don't trust strangers at home

2-week free trial + navigator background verification published + gradual trust-building protocol

Doctors don't engage with the dashboard

✓ Start with clinic partnerships where doctors benefit from reduced no-show rates + 1-tap alert system

Families feel CareNest replaces their duty

Position as 'extending your care, not replacing it' — navigator updates always go to family first

*"The best care isn't just medical —
it's someone who remembers your name."*
